Subject Index

N-Acetylserotonin, metabolism of serotonin through, 54
Activities of daily living, independence in, 350–360
Adenylate cyclase catalytic subunits, β-adrenergic receptor and, 302
β-Adrenergic modulation, cardiovascular function and, 293–308
β-Adrenergic receptors, differential regulation of, 200–203
α2-Adrenoceptors, altered sensitivity of, 206–212
Age differences, functional performance and, 353
Age-dependent diseases, aging of connective tissue and, 20
Aging phenomena, free radical theory and, 132–133
Agonists, affinity of the β-adrenergic receptor for, 297–302
Alkaline phosphatase content, effect of dietary restriction on, 43–44
Alymphoid fetal thymus, 240–250
Alzheimer's disease
  free radical injury in, 149–152
  neuropathological changes in, 270–279
  synaptic junctional areas in, 285–291
Amyloid β protein precursor, Alzheimer's disease and, 271–272
Amyloid fibril formation, pathomechanism of, 270–279
Amyloidosis, free radical reactions and, 135
Anion carriers, mitochondrial, 160–164
α1-Antichymotrypsin, binding of amyloid β protein with, 273
Antioxidants, dietary, free radical damage and, 132
Apolipoprotein A-1, free form of, 342–348
Apoptosis, 74–76
Arrhythmias, increased incidence of, 311–318
Arteriosclerosis
  cell-matrix interactions in, 331–339
  cellular interactions in the arterial wall in, 321–328
Astrocytes, amyloid deposit fragmentation and dispersal and, 278–279
Atherosclerosis, free radical reactions and, 134–135

Berlin Aging Study (BASE), 350–360
Bioenergetic mosaic in tissues, 94–95
Biomarkers of aging
  connective tissues and, 16–21
  reliability and stability of, 1–7
  survival kinetics of, 9–14
Body weight, effect of dietary restriction on, 40–41
Bone marrow, thymocyte progenitors in, 240–250
Bone thickness, age-related changes in, 37
Bone tissue, cell-to-cell interactions in, 120–124
Brain
  aging of, and neuronal plasticity, 180–185
  human, white matter atrophy in, 260–269

c-*myc* and c-*myb* protooncogenes, proteins encoded by, 113–114
Caloric restriction, free radical damage and, 131–132
Cancer, free radical reaction level and, 133–134
Canonical correlation analysis of a biomarker, 4–7
Capillary network, morphometric investigation of, 260–269
Cardiovascular structure and function, age-associated changes in, 293–308
Cellular aging in connective tissues, 16–19
Centenarians, genetic potential expressed by, 23–24
Central nervous system
  aging of, 180, 183
  synaptic plasticity in, 285–291
Chloride channels, muscle, 154–158
Chromosome number, somatic mutation by transposable elements and, 84, 88–89
Clonidine, microinfusion of, into the locus coeruleus, 208–212
Connective tissue aging, biomarkers of, 16–21
Copia, somatic activity and, 85–89
Corpus callosum, 260–269
Cortex, cerebral, age-dependent changes in, 260–269
Cotransport systems, sodium, 25–26
Crown rump length, effect of dietary restriction on, 41–42
Cyclic adenosine monophosphate, β-adrenergic receptor stimulation and, 302
Cytopathies, mitochondrial, 93

Death
  chance of, 126–128
  neuronal, 181–182

Desmethylimipramine, down-regulation of β-adrenergic receptors and, 202
Deterministic parameter of life span, 12–14
Dietary restriction
development of leukemia and, 49–51
National Institute on Aging study of, 36–44
retardation of aging processes by, 29–31
Displacement loop content of mitochondrial DNA, 194–199
DNA
deleterious changes in, 130
human telomeric, 59
Dominance hierarchy among mice, 47–49
Drosophila melanogaster, aging of, 83–89

Elastonectin, interaction of cells mediated by, in arteriosclerosis, 333–338
Electrocortical slow-wave sleep, effects of clonidine on, 206–212
Element *412*, somatic activity and, 85–89
Enalapril, arrhythmias induced by, 315–318
Endocrine function, thymic, 231–232
Endoplasmic reticulum, amyloid fibrils in, 274–275
Endothelial cells, bone, 120–121
Endothelium, arteriosclerotic lesions in, 325–327
Energy intake, restriction of, 31–34
Enzyme systems, decrease of activity of, 25
Epithalamin, effect of, on melatonin synthesis, 53–56
Equation
age-specific mortality, 29
survivorship, 11
time for mortality rate to double, 30
vitality and age, 11
Extensor digitorum longus muscle, 154–158
Extracellular matrix, age-dependent modifications of, 19–20

Fibronectin, presence of, in vascular wall, 333
Fluctuance of a biomarker, 3
Free radical damage, susceptibility of Alzheimer's disease fibroblasts to, 149–152
Free radical theory of aging, 128–136
Functional performance, relationships between activities of daily living and, 356–357

G protein
β-adrenergic receptor and, 302
changes in amounts of, 165–171
Genome organization, age-related deterioration and, 58–67
Gonadectomy, thymus regeneration induced by, 252–254
Growth factors, role of, in cell-to-cell interactions in bone, 123
Gyrus rectus, 260–269

Heath-related variables, relationships between activities of daily living and, 357–358
Heart mitochondria, 160–164
Heparan sulfate proteoglycan, binding of amyloid β protein with, 273
Heterogeneity in the population, accounting for, 9–10
Hexokinase, ubiquitination of, 105–106
Hippocampal mossy fibers, zinc level in, 187–192
Hormones, brain β-adrenergic receptors regulated by, 202
Hypothalamus, capability of, to release luteinizing hormone releasing hormone, 214–217
Hypoxanthine-guanine phosphoribosyltransferase gene, 59–60

Immortalization, cellular, 70–80
Immune deficiency of age, free radical reactions and, 135
Immunofixation electrophoresis, detection of free apolipoprotein A-1 and, 342–343
Independence, maintenance of, in old age, 350–360
Indolamines, pineal, 53–54
Interferon-γ production, influence of age on, 256–259
Interleukin-2 receptors, expression of, enhanced by thymosin α1, 227
Interleukins, mixed, T cell development and, 235–237
Intraindividual variability of a biomarker, 2–3

Lesion development, Alzheimer's disease neuropathology and, 270–279
Lesions, gelatinous, in arteriosclerosis, 324
Leukemia, susceptibility to, and social order, 46–51
Lipid composition, effects of aging on, 160–164
Lipoproteins, atherogenic, risk factors and, 322–323
Locus coeruleus, microinfusion of clonidine into, 208–212

Luteinizing hormone releasing hormone
release, effects of aging on, 214–223
Lymphocytes
mononuclear, in arteriosclerosis, 323–324
role of, in bone resorption, 122–123

Macromolecules, cellular organization of, 143
Macrophages
monocyte-derived, in arteriosclerosis, 323–324
role of, in bone resorption, 122–123
Major histocompatibility complex, syngeneic, 247–248
Mathematical models of mortality kinetics, 10–14
MC 540 uptake, cells activated by phytohemagglutinin stimulation measured by, 113–114
Melatonin, metabolism of serotonin into, 53–54
Membrane potential, repolarizing effect of phytohemagglutinin treatment on, 111
Memory
age decline in, 172–178
spatial, in aged rats, 187–192
Metabolic rate, reduction in, 32
Mitochondrial DNA
displacement loop content of, 194–199
mutations in, 92–101
Mitochondrial proteins, ubiquitination of, 105
Mitotic response to concanavalin A, 253
Muscle, changes of chloride channel regulation in, 154–158
Myelinated nerve fibers, number and density of, 260–269

N-terminal amino acid residues 1–14, T cell function modulated by, 226–230
Neurofibrillary tangles in Alzheimer's disease, 277–278
Neuron, capability of, to elaborate information, 182–183
Nonhuman primates, dietary restriction in, 36–44
Normal values in extreme old age, 23–26
Nucleoside diphosphatase, amyloid fibrils and, 273–274
Nucleus tractus solitarius, clonidine infused unilaterally into, 208–212
Nutrition, effect of, on aging processes, 29–34

Opioid mu, k, and delta type receptors, effect of aging on, 218–222
Ordinal stability of a biomarker, 1–3
Origin and evolution of life, free radical reactions in, 130–131
Ornithine decarboxylase, 78–79
Osteoblastic and osteoclastic cells, interactions between, 121–122
Ouchterlony-coupled radial immunodiffusion, detection of free apolipoprotein A-I in, 343
Oxidative phosphorylation, mitochondrial, 100
Oxygen free radicals (*see* Free radical)

P element, transposition of, and life span, 86–87
P53 gene, 73–75
Paired helical filaments in Alzheimer's disease, 277–278
Philadelphia Geriatric Center Morale Scale, 352
Phosphate carriers, effects of aging on, 160–164
Phosphorylations, intracellular, 302–303
Phytohemagglutinin, response of human lymphocytes to, 110–118
Pineal peptide preparation, effect of, on life span, 53–56
Pituitary, binding characteristics of luteinizing hormone releasing hormone receptors in, 222–223
Plaques, formation of different types of, 275–276
Plasma norepinephrine, receptor desensitization and, 306–307
Polymerase chain reaction, amplification of mitochondrial DNA by, 95–99
Polymorphonuclear neutrophilic leukocytes, characterization of, 165–171
Precentral gyrus, 260–269
Progenitors, thymocyte, frequency of, 243–245
Programmed electrical stimulation, arrhythmias induced by, 313–315
Protein
dietary, free radical damage and, 132
intracellular distribution of, 103–107
Protein kinase activity, β-adrenergic receptor stimulation and, 302
Protein kinase C, block of chloride conductance produced by, 154–158
Protein level, age-related alterations in, 62
Psychosocial variables, relationships between activities of daily living and, 358
Pyruvate carriers, effect of aging on, 160–164

Radial immunodiffusion, detection of free apolipoprotein A-I and, 343
Reconstitution, thymic, 249

Reoxygenation, arrhythmias induced by, 312–313
Reperfusion, arrhythmias induced by, 312–313
Replications, cell, in the thymus, 246–247
Retinoblastoma sensitivity gene, 73–75
Rhodamine 123, cellular parameters measured by, 115

Senescence, cellular, 70–80
Senile dementia of the Alzheimer type, synaptic numerical density in, 287–291
Sex differences, functional performance and, 353
Simian virus, cells immortalized with, 71–73
Social order, susceptibility to leukemia and, 46–51
Somatic mutations, site specificity of, 61
Somatic tissues, transposable elements active in, 83–89
Stochastic parameter of life span, 12–14
Stroma, fetal thymic, 245–248
Structural stability of a biomarker, 4–7
Subject-performed task, 172–178
Sulfated glycoprotein-2, 78–80
Superoxide anion radicals, formation of, 144–145
Superoxide dismutase activity, susceptibility of Alzheimer's disease fibroblasts to, 149–152
Superoxide dismutase, role of, as a protective enzyme, 144–145
Synaptic junctional areas, Alzheimer's disease and, 285–291

T cell development, intrathymic, autocrine and paracrine actions in, 232
T cell expression after gonadectomy, 254
T lymphocyte compartment, aging in the, 240–250
Tail tendon fiber break time, reliability of, 2
Telomeric repeat assays, 59
Testis, binding characteristics of luteinizing hormone releasing hormone receptors in, 222–223
Thymic microenvironment, bone marrow cell education in, 249
^{3}H-Thymidine, c-myc and c-myb protein expression and, 114–115
Thymomodulin, restorative effect of, 256–259
Thymosin α1, T cell function modulated by, 226–230
Thymus
  alymphoid fetal, 240–250
  influence of endocrine tissues on, 231–237
Thymus regeneration, induction of, by gonadectomy, 252–254
Tissue-specific degenerative diseases, mitochondrial DNA mutations and, 99
Transposable elements, somatic activity of, 83–89
Troponin-I, phosphorylation of, 303
Tubuloreticular structures, colocalization of, 275
Tumor suppressor genes, cellular senescence and, 73–74

Ubiquitination of proteins, 103–107
Ultrashort feedback mechanism, integrity of, controlling luteinizing hormone releasing hormone release, 217

Variance of a biomarker, 3
Vascular wall
  β-amyloid fibrils in, 276–277
  cell-matrix interactions in, 331–339
Vitality, kinetics hypothesized for, 11–13

White matter, cerebral, age-dependent changes in, 260–269

Zinc
  level of, in hippocampal mossy fibers, 187–192
  restorative effect of, 256–259
